RIKEN KEIKI

Summary

The RIKEN Model RI-557 is a compact, single gas infrared monitor designed to measure one of the specified gas and range for 1) carbon monoxide, 2) carbon dioxide or 3) methane from the gas and range selector chart. The sample gas is drawn into this lightweight and rugged unit by an internal pump and is then analyzed through a Non-Dispersive Infrared Absorption detector. A recorder output is standard to enable convenient and easy recording of your readings. Model RI-557 is powered on AC mains provided with LED digital display to meet the extensive utility such as in automotive, environmental control, laboratories, university laboratory, research institutes and many others.
